

Module_8_Assignment

Name: Md. Abrar Hamim (Ostad Flutter Batch 16)

Course: App Development with Flutter & AI

My Assignment Solution is as follows:

```
//Question 1 Solved
class Book {
  var title;
  var author;
  var price;

  Book(this.title, this.author, this.price);

  double discountedPrice(double discountPercent) {
    return price - price * (discountPercent / 100);
  }

  @override
  String toString() {
    return '''
      Book information
      Title: $title
      Author: $author
      price: $price''';
  }
}

void main() {
  //For Book Class(Question 1)
  var book1 = Book('House of earth and blood', 'Sarah J. Maas',
12.99);
  var book2 = Book('Kingdom of Ash', 'Sarah J. Mass', 14.99);
```

```

print(book1);
print('\t Price after ${book1.discountedPrice(20)}\n');
print(book2);
print('\t Price after ${book2.discountedPrice(20)}\n\n');

//For Employee Class(Question 2)
var manager = Manager('Momshad Dinury', 500000, 'Embedded
Systems & Apps');
manager.displayInformation();

var developer = Developer('Abrar Hamim', 66000, 'Dart');
developer.displayInformation();

//For Appliance Class(Question 3)
var fan = Fan();
fan.turnOn();
fan.turnOff();

var light = Light();
light.turnOn();
light.turnOff();
}

//Question 2 solved
class Employee {
  var name;
  double salary;

  Employee(this.name, this.salary);
}

class Manager extends Employee {
  var department;

  Manager(super.name, super.salary, this.department);
}

```

```

    void displayInformation() {
        print(''
            Manager Information
            name: $name
            salary: $salary
            department: $department \n
        '');
    }
}

class Developer extends Employee {
    var programmingLanguage;

    Developer(super.name, super.salary, this.programmingLanguage);

    void displayInformation() {
        print(''
            Developer Information
            name: $name
            salary: $salary
            department: $programmingLanguage
        '');
    }
}

//Question 3 Solved
abstract class Appliance {
    void turnOn();
    void turnOff();
}

class Fan extends Appliance {
    @override
    turnOn() {
        print('Fan is now running');
    }
}

```

```
@override
turnOff() {
    print('Fan is now off');
}
}

class Light extends Appliance {
    @override
    turnOn() {
        print('Light is switched on');
    }

    @override
    turnOff() {
        print('Light is switched off');
    }
}
```
